WHAT IS CLAIMED IS:

1	1.	An Rì	Nase A superf	family po	lypeptide	having an	N-terminus	of the sec	quence:
---	----	-------	---------------	-----------	-----------	-----------	------------	------------	---------

- 2 X¹X²SLX³V, wherein X¹ represents methionine or is absent, X² represents glycine
- or is absent, and X³ represents an amino acid residue, said RNase A superfamily
- 4 polypeptide being selectively toxic to a proliferating endothelial cell.
- 1 2. An RNase A superfamily polypeptide of claim 1 having SEQ. ID. No.: 2.
- 1 3. An RNase A superfamily polypeptide of claim 1 having 90% homology to SEQ.
- 2 ID. No.: 2.
- 1 4. An RNase A superfamily polypeptide of claim 1 having SEQ. ID. No.: 4.
- 1 5. An RNase A superfamily polypeptide of claim 1 having 90% homology to SEQ.
- 2 ID. No.: 4.
- 1 6. An RNase A superfamily polypeptide of claim 1 wherein the N-terminus is
- 2 MSLHV.
- 1 7. An RNase A superfamily polypeptide of claim 1 wherein the N-terminus is
- 2 MGSLHV.
- 1 8. An RNase A superfamily polypeptide of claim 1 wherein the N-terminus is
- 2 attached to the EDN protein.
- 1 9. An RNase A superfamily polypeptide of claim 1 wherein the proliferating
- 2 endothelial cell is a neoplastic endothelial cell.
- 1 10. An RNase A superfamily polypeptide of claim 1 wherein the proliferating
- 2 endothelial cell is a non-neoplastic endothelial cell.
- 1 11. An RNase A superfamily polypeptide of claim 9 wherein the neoplastic
- 2 endothelial cell is a Kaposi sarcoma KS Y-1 cell.
- 1 12. An RNase A superfamily polypeptide of claim 9 wherein the neoplastic
- 2 endothelial cell is a KS Y-3 cell.

6

1 13. An RNase A superfamily polypeptide of claim 9 wherein the neoplastic 2 endothelial cell is selected from the group consisting of KS 1, KS 2, KS 3, KS 4, 3 KS 5, and KS 6 cells. 1 14. A pharmaceutical composition comprising 2 a unit dosage RNase A superfamily polypeptide comprising an N-terminus of the sequence: X¹X²SLX³V, wherein X¹ represents methionine or is 3 absent, X² represents glycine or is absent, and X³ represents an amino acid 4 residue, said RNase A superfamily polypeptide being selectively toxic to a 5 6 proliferating endothelial cell; and 7 b. a pharmaceutically acceptable carrier. A method of selectively inhibiting the growth of a proliferating endothelial cell by 15. 1 contacting said cell with an RNase A superfamily polypeptide comprising 2 a. an N-terminus of the sequence: X¹X²SLX³V, wherein X¹ represents 3 methionine or is absent, X² represents glycine or is absent, and X³ 4 represents an amino acid residue, said RNase A superfamily polypeptide 5 6 being selectively toxic to a proliferating endothelial cell; and 7 b. detecting the inhibition of the growth of said cell. 16. The method of claim 15 wherein the proliferating endothelial cell is a neoplastic 1 2 cell. 1 17. The method of claim 16 wherein the neoplastic cell is a Kaposi sarcoma cell. 18. 1 The method of claim 17 wherein the Kaposi sarcoma cell is selected from the group consisting of KS 1, KS 2, KS 3, KS 4, KS 5, KS 6, KS Y-1, and KS Y-3 2 3 cells. 19. 1 A method of treating a patient with proliferating endothelial cells by 2 a. administering an effective amount of an RNase A superfamily polypeptide comprising an N-terminus of the sequence: X¹X²SLX³V, wherein X¹ 3 represents methionine or is absent, X² represents glycine or is absent, and 4 X³ represents an amino acid residue, said RNase A superfamily 5

polypeptide being selectively toxic to a proliferating endothelial cell; and

/		b. detecting the amelioration of Kaposi sarcoma in said patient
1 2 3	20.	The method of claim 19 wherein the RNase A superfamily polypeptide is in an aqueous solution comprising a unit dosage and pharmaceutically acceptable excipients.
1	21.	A method of manufacturing a pharmaceutical composition comprising the step of
2 3		combining the RNase A superfamily polypeptide of claim 1 with a pharmaceutically acceptable carrier.
